CommandCoreTM XL
Datacenter-Grade Meets Private
Agentic AI

CommandCoreTM is India's first fully
sovereign implementation of AI-in-a-Box.

100% AI. 0% Internet.

Why Agentic AI In a Box?

AI adoption has reached an inflection point. While public cloud AI works for experimentation, mission-critical industries face fundamental limitations — data sovereignty, regulatory exposure, latency, and operational risk.

AI-in-a-Box is the next evolution of AI infrastructure with a self-contained AI micro-datacenter that brings compute, models, agentic intelligence and governance inside your perimeter.

It allows organizations to:

- Run advanced AI without internet access
- Keep sensitive data fully on-premise
- Deploy Agentic AI in weeks, not years
- Scale from edge to data center seamlessly

Use Cases of CommandCore™

GOVERNMENT & PUBLIC SECTOR

- Secure analytics & dashboards
- Citizen data intelligence
- Policy simulation & planning
- Offline AI for critical departments

BFSI

- Fraud detection & compliance
- Risk analytics
- Secure AI copilots

ENTERPRISE & INDUSTRY

- Process automation
- Predictive maintenance
- Supply chain intelligence
- Autonomous enterprise workflows

SECURITY & SURVEILLANCE

- Intelligence analysis & fusion
- Sensor, satellite & video processing
- Autonomous threat detection
- Secure AI red-teaming

KOGO OS : The Flagship Private Agentic AI Platform for Enterprise

Full Stack Private AI OS

Flagship Private Agentic OS for Sensitive Data Enterprise. Sovereign, portable with secure, customizable multi-agent automation.

Security Architecture

Air-gapped, zero-egress, RBAC-controlled stack with audits, red-team tests and data guardrails.

Tools & Pre Built Agents

Multimodal agents powered by 500+ connectors, governance, and full observability with 0 dependence on any cloud models.

Workspaces & Edge Ops:

Role based workspaces with HITL loops, interoperability and edge-to-datacenter deployment.

ARINOX

CommandCore™ S

Agentic Edge AI

Accelerated by NVIDIA AGX Jetson Orin

Jetson Orin brings real-time AI to the edge, ideal for disconnected, mobile and tactical environments.

Typical Use Cases

- Batch Processing of Audio, Video, Image, Sentiment Analysis
- Video analytics & computer vision
- Autonomous systems & IoT AI
- Remote and rugged deployments

GPU 64GB

- 2 GPC
- 8 TPC
- 2048 CUDA cores
- 64 Tensor Cores
- Up to 275 INT8 TOPS

CPU

- Arm Cortex-A78AE cluster
- Up to 12 cores (high SKU)

Memory

- Up to 64GB LPDDR5
- ~204 GB/s bandwidth

FP Compute

- Up to 5.3 TFLOPS FP32
- Higher FP16 throughput with sparsity

Power Profile

- Optimized for edge deployments
- Configurable power modes

CommandCore™ M

Blackwell powered agents on your desktop

Accelerated with NVIDIA Grace Blackwell Superchip GB10

Description

Acer GB10 is a desktop-scale AI system powered by NVIDIA Grace-Blackwell, designed for secure enterprise AI workloads where space, speed and sovereignty matter.

Typical Use Cases

- Secure AI labs & R&D
- Local LLM inference & fine-tuning
- Department-level analytics
- Simulation & experimentation without cloud
- Batch Processing of Audio, Video, Image, Sentiment Analysis

Core Architecture

- NVIDIA Grace-Blackwell (GB10) Superchip
- 20-core Arm Grace CPU (10x Cortex-X925 + 10x Cortex-A725)
- Blackwell GPU with:
 - 5th Gen Tensor Cores
 - 4th Gen RT Cores

AI Performance

- Up to 1 PFLOP FP4 AI performance
- Supports up to 200B parameter models
- Dual-node scaling up to ~405B parameters (via ConnectX)

Memory & Storage

- 128 GB unified coherent memory (CPU + GPU)
- Up to 4 TB NVMe storage

Networking

- NVIDIA ConnectX NIC
- High-speed interconnect for multi-system scaling

CommandCore™ XL

Datacenter-Grade Meets Private Agentic AI

Accelerated with 2x RTX Pro 6000 Blackwell

DESCRIPTION

The Command Core Datacenter is built for large-scale, mission-critical AI workloads requiring maximum performance, reliability and compliance.

This configuration delivers true on-prem AI infrastructure, capable of running large models, multi-agent workflows, analytics pipelines and AI governance systems — fully air-gapped.

Typical Use Cases

- Secure AI Operations Hub
- Enterprise Process Automation Engine
- Real-Time Intelligence & Monitoring Platform
- Large Model Inference & Fine-Tuning Environment
- Executive Decision Intelligence Dashboard
- AI Governance & Red Teaming Environment

Compute

- Intel® Xeon® w7-2575X
- 22 Cores / 44 Threads
- 45MB Cache
- 3.0 GHz (up to 4.8 GHz)
- 250W TDP

GPU

- 2x NVIDIA RTX Pro 6000 Blackwell (Workstation Edition)
- Built for:
 - Large model inference
 - Multi-agent orchestration
 - High-throughput AI pipelines

Memory

- 6x 32GB DDR5-4800 ECC RDIMM
- Total: 192 GB ECC RAM

Storage

- 2x 2TB SATA NL 7200RPM (Data)
- 1x 1TB PCIe NVMe SSD (OS / Fast Access)

Networking

- 2-port X550 10GbE Adapter
- Power & Reliability
- 2000W enterprise PSU
- 3-Year Warranty
- Enterprise-grade chassis

ARINOX

100% Secure. 0% Risk.
